Support

Different steps

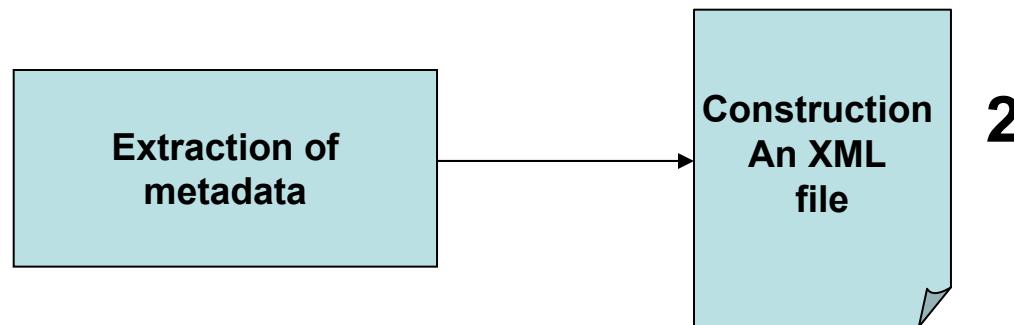

1. Extraction of metadata

- **Extraction of metadata**
 - Semi automatic extraction
 - Algorithms application
 - Manual (complementary) input using forms
 - Validation by a specialist

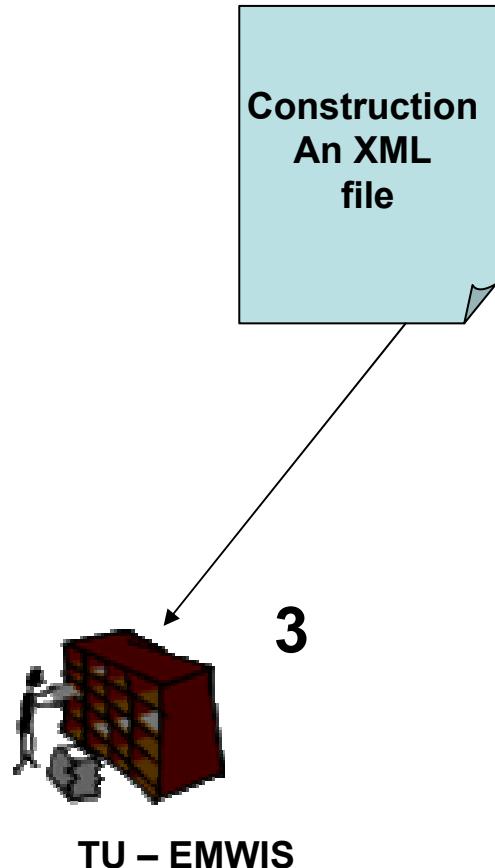

2. Generating the XML file

2

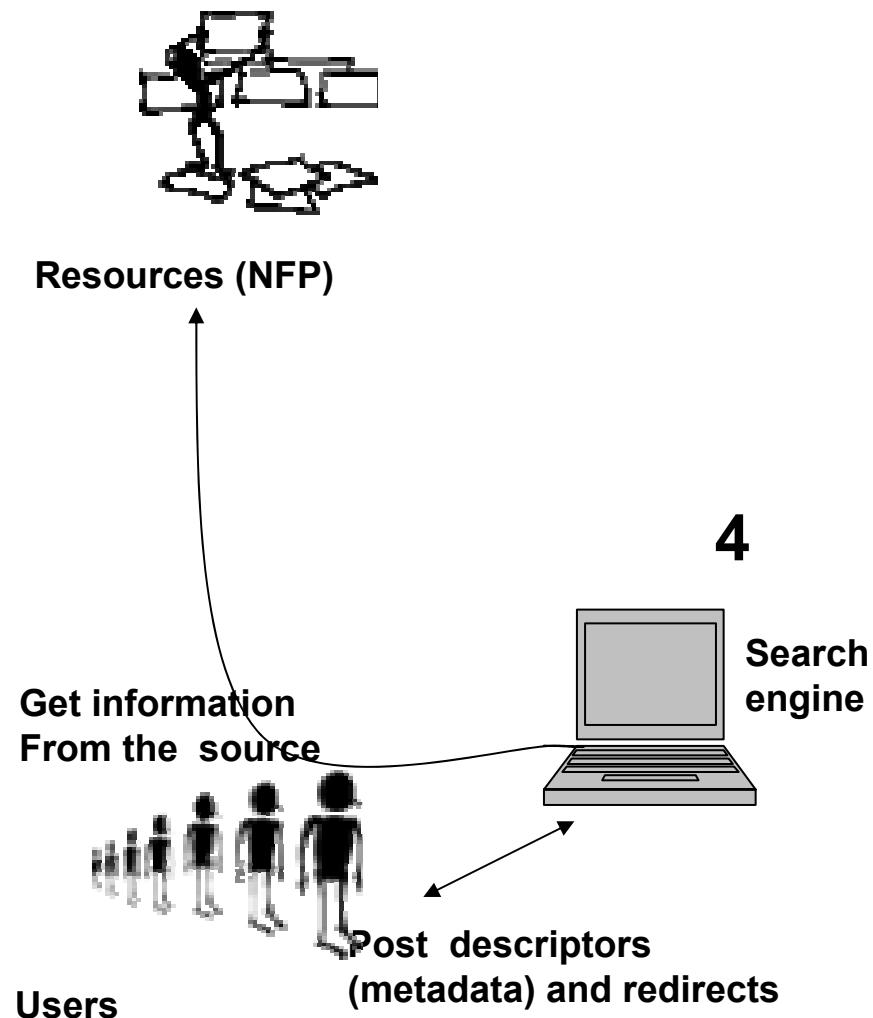

- Generating the XML file
 - From a database
 - When creating HTML pages (e.g. with a management tool of contents)

3. Aggregation of the metadata

- Aggregation of the metadata
 - Collecting all the XML files
 - Validation, consolidation, classification
 - Repository in a database

4. Search

- Display resources:
 - Provides the relevant values of the metadata
 - Redirects towards the source of information for full content
