WATER & SANITATION

Government plans: approx. 50 billion US\$ investment in water sector by 2037, another 10 billion US\$ for the Rural Sanitation Services Program.

Priorities: (i) Desalination Industry: innovative technologies, brine management, success cases of PPP experiences & other private sector involvement scenarios; (ii) Wastewater Treatment Technologies: upscaling technologies for existing WWTPs, Small scale sanitation for rural villages, low cost sanitation technologies; (iii) Drinking Water Supply: innovative technologies for treatment & leak detection, water and sanitation safety plans, ground water treatment technologies; (iv) Industrial Wastewater Treatment Technologies for Water Recycling; (v) Flood-Early Warning System & rain water harvesting techniques; (vi) Artificial Intelligence through Smart Water & Sanitation Technologies; (vii) Agriculture Drainage Water Treatment for Reuse.

WASTE

»»» **Government plans:** New waste management act effective, since February 2022. Produced Solid Waste per year in Egypt is about 95 to 100 million tons.

Egypt has 28 recycling plants. This number is to be doubled in the next few years. Nine additional waste transfer stations and 20 new landfills are also planned.

»»» **Priorities:** (i) Municipal Solid Waste Management: institutional setup, solid waste handling, technologies for converting solid waste to resources; (ii)

Sludge to Resources (Technologies for biogas, incineration, energy, fertilization, .. etc.) (iii) Industrial and Hazardous Waste Management: innovative technologies for handling, treatment, and safe disposal.

INFRASTRUCTURE

»»» Egypt plans to build up to 14 new smart cities across the country including the Nile Delta.

»»» Expansion of the new administrative capital east of Cairo with a population of about 6.5 million.

»»» The government's top priority is to expand the infrastructure between and within the cities and to expand the rail networks, roads and ports for the expansion of industry including the Suez Canal Economic Zone.

Powering Water Sustainability with Smart Energy Solutions.

»»» Energy-efficient Pumping and Aeration: High-efficiency pumps and aeration systems reduce electrical energy use.

»»» Smart Monitoring and sensor Control Real-time monitoring optimizes performance and saves energy.

»»» Advanced Desalination and Water Treatment Efficient desalination and grey water systems lower electrical energy demand.

»»» Leak Detection and Network Management Reduces water losses and the energy needed for pumping.

»»» Environmental Innovations & Alternative Energy Clean and alternative energy, including solar, plus AI-based smart operation.

WATER & SANITATION

WASTE MANAGEMENTS

Energy & INFRASTRUCTURE

- 📍 Sewer Systems
- 📍 Leak Detection Technologies
- 📍 Laboratory Equipment
- 📍 Pumps
- 📍 Sanitary Fittings
- 📍 Wastewater Treatment Technologies
- 📍 Industrial Wastewater Treatment
- 📍 Valves and Fittings
- 📍 Desalination Industry
- 📍 Water Treatment Technologies
- 📍 Smart Tech. & Artificial intelligence

- 📍 Municipal Solid Wastes
- 📍 Sludge Treatment Technologies
- 📍 Composting equipments
- 📍 Renewable Energies
- 📍 Road Cleaning
- 📍 Sanitary Facilities
- 📍 Thermal Technologies
- 📍 Soil Protection
- 📍 Special Transport Vehicles
- 📍 Treatment of Toxic Waste
- 📍 Waste Avoidance and Utilization
- 📍 Waste Disposal

- 📍 Communication Technology
- 📍 Energy Engineering
- 📍 Energy Generation
- 📍 Solar Energy Systems Application
- 📍 Solar Cells/Energy
- 📍 Information Technology
- 📍 Mobility Solutions
- 📍 Municipal Engineering
- 📍 Research and Development
- 📍 Sustainable Building
- 📍 Telecommunications
- 📍 Transport
